

A series from Routledge Research, publishing research monographs and scholarly edited collections—

## **Routledge Studies in Historical Linguistics**

Series Editor: Claire Bower, Yale University, USA

Historical linguistics is one of the oldest disciplines of linguistics. It is the glue of much other foundational work on the nature of language and provides crucial insights into how humans have migrated and interacted with one another over the last five thousand years. It is both a highly theoretical and profoundly empirical field, rooted in the traditions of language documentation. **Routledge Studies in Historical Linguistics** reflects the diversity of work that studies language from a diachronic perspective. The scope of the series includes: 1) diachronic issues within specific subfields of linguistics, including (but not limited to) issues related to the theory of change in phonology, morphology, phonetics, syntax, semantics, pragmatics, language contact, and typology; 2) Within historical linguistics, work dealing with language classification, grammaticalisation, contact-induced change, reconstruction, as well as theoretical perspectives on language evolution; 3) comparative/historical grammars of specific languages and language families, including detailed comparative reconstruction in phonology, morphology, and syntax; 4) interdisciplinary studies which combine language change with insights from (but not limited to) archaeology, anthropology, history, or geography.
